IPL Data Analysis

Introduction to Matplotlib

- Matplotlib is a popular plotting library in Python used for creating static, animated, and interactive visualizations.
- used for data visualization
- matplotlib == datastrucuture + math + power full visualizaiton library
- helps to create charts and graphs to visualize data.

MATRICES / NUMPY

- Matrix is the tabular representation of the data
- Lots of data are stored in table format,thats is why Matrices is very important topic in python
- as we working on dataframe so matrices plays a major role
- List is one dimension & matrix is multidimension
- indexing is very important to plot the data points
- we will see that & we gonna analyze the players
- hear i have taken top 10 highest paid players in 2015-2016 season
- we will analyze how 10 players have been playing over the past 10 years & we had the data for past 10 years
- our main goal is to find trends,patterns & their performance for the past 10 years
- lets analyze the statistics of the Cricket players
- gp - total games played,mpg - minutes per game,field goal(accuracy), ppg (points per game) -- this is no of point player has scores in that season

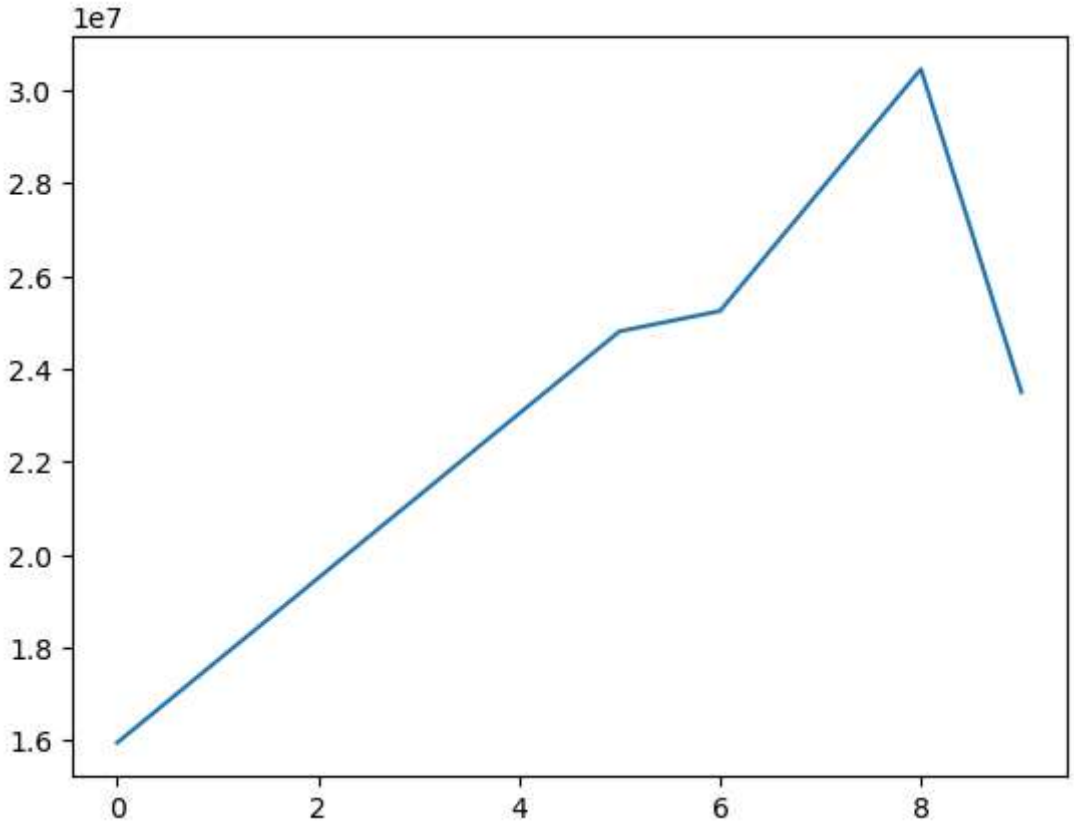
[<matplotlib.lines.Line2D at 0x1d611de2ea0>]
```



insight1 : Based on the above graph sachin salary increased till 2023 & then it decreased

In [45]:
```
plt.plot(Salary[0],c = 'r')
```

Out[45]:
```
[<matplotlib.lines.Line2D at 0x1d611e50e00>]
